DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 12/11/06 have been fully considered but they are not persuasive. Applicant argues Dobrin does not teach a backsheet having a physical variation along a longitudinal axis of the article. However, the examiner maintains a physical variation exists in the longitudinal direction. Figure 3, as applicant points out appears to be a lateral cross-sectional view of the article. The examiner's reference to Figure 3, was with respect to the apertured regions of zone 76. Figure 2 shows apertures in the backsheet in zone 76 as well. The physical variation exists between the apertured and unapertured regions. These regions are present in a lateral and longitudinal direction in zone 76 as shown in Figure 2. The difference in the apertured and unapertured areas would result in at least a difference in density due to the presence of the apertures and presumably a difference in weight as well. Therefore, the rejection is maintained.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Page 2

Art Unit: 3761

3. Claims 1, 3, 5-8 and 11-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Dobrin et al. USPN 5571096.

As to claims 1, 3, 5, 6, 8, 19, and 20, Dobrin discloses a disposable absorbent article comprising: an absorbent core 28, a liquid permeable topsheet 24, and a liquid impermeable backsheet 26 as claimed. The backsheet of Dobrin has a physical variation along at least one axis, wherein a physical variation defines a first backsheet zone and a second backsheet zone (Figures 2 and 3). The physical variation is measured by the physical properties of thickness, weight, and density as Dobrin discloses microapertured regions and unaperatured regions of the backsheet. The apertured regions have a lower weight, thickness, and density as compared to unapertured regions. Figure 2 shows a physical variation in the lateral axis between zones 76 and 74. However, there is some physical variation in the longitudinal axis as well, which is demonstrated in Figure 3 between the apertured and unapertured regions of zone 76. Dobrin discloses at least one elastomeric element 65 attached to the backsheet as claimed (see col. 12, lines 21-31 where Dobrin incorporates by reference Lawson USPN 4695278 who teaches elastic members attached in an elastically contractible condition col. 7, line 28 through col. 8, line 13). Dobrin shows elastic components in the waist region, which are not present in the crotch regions. Therefore, a given property, such as density and weight differs from an average of the given property of at least one of the waist regions.

As to claim 7, Dobrin incorporates by reference Lawson who teaches curvilinear elastic elements (Lawson col. 8, lines 44-51).

As to claims 11-17, Dobrin teaches a non-uniform backsheet where an outer cover 90 is joined to a central unapertured region, an outer apertured region or both (col. 9, line 46 through col. 10, line 33).

As to claim 18, Dobrin incorporates by reference Lawson who teaches curvilinear elastic elements (Lawson col. 8, lines 44-51).

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 9 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dobrin USPN 5571096. Dobrin teaches a backsheet having zones, which vary by a physical variation, see the rejection of claim 1 supra. Dobrin teaches an elastomeric element attached to the backsheet in an elastically contractible condition, which allows the elements to contract or gather the backsheet in a relaxed state, indicating the path length of the element is less than a total path length of the backsheet where the element is attached. Therefore, the general conditions of this claim are disclosed. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the outer cover of Dobrin with the claimed ratios of the present invention, since where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation, In re Aller et al. 105 USPQ 233.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jacqueline F. Stephens whose telephone number is (571) 272-4937. The examiner can normally be reached on Monday-Friday 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tanya Zalukaeva can be reached on (571) 272-1115. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
